# MILESTONE HODL TOKEN

## $MHT

🔥🔥 *Trust the process* 🤝 *Earn the growth* 🔥🔥

**WHITEPAPER V_6 — 05_05_2026**

| NETWORK | TOTAL SUPPLY | BUY TAX | SELL TAX | AUDIT |
|---|---|---|---|---|
| BNB Smart Chain | 1,000,000,000 MHT | 2% | 5% | SolidProof V2.3 — 85.36/100 |

## I. ABSTRACT

Milestone HODL Token ($MHT) is a fully autonomous, self-sustaining DeFi token deployed on BNB Smart Chain. Built on a single principle — reward those who hold — MHT uses Chainlink Automation and a multi-layer smart contract architecture to distribute rewards, deepen liquidity, and burn supply automatically, without any human intervention after deployment.

The owner key is renounced at launch. No admin wallet can mint, pause, or redirect funds. Every mechanism — milestone releases, LP injections, tax swaps — is governed entirely by on-chain code and decentralized oracles. MHT is not a promise. It is a program.

## II. THE PROBLEM

Most DeFi tokens suffer from the same structural flaws: dev wallets that dump, liquidity that disappears after launch, reward systems that require manual intervention, and teams that disappear once initial hype fades.

$MHT was designed to eliminate every one of these failure modes at the contract level — not through promises, but through code that cannot be changed after deployment.

## III. THE MHT SOLUTION

**Four automated systems working simultaneously:**

| SYSTEM | MECHANISM | BENEFIT |
|---|---|---|
| Milestone Rewards | Chainlink releases 5% vault at each $1M MCap milestone | Holders earn MHT automatically |
| Progressive LP | 200M MHT injected in 5 tranches at MCap targets | Liquidity deepens as project grows |
| LP Flush | ~65.7M MHT injected in 6 tranches at price targets | Floor price supported at every level |
| Tax Auto-Swap | Buy 2% / Sell 5% — auto-burns + auto-LP + marketing BNB | Every trade strengthens the ecosystem |

## IV. TOKENOMICS

| ALLOCATION | AMOUNT | % | DESTINATION |
|---|---|---|---|
| Smart-Vault | 500,000,000 | 50% | Locked in contract — milestone releases only |
| LP Progressive | 200,000,000 | 20% | 5 tranches x 40M — MCap triggers — LP burned |
| Marketing | 150,000,000 | 15% | Marketing wallet at deploy |
| START (LP Init) | 50,000,000 | 5% | 30M LP init (PinkLock 6mo) + ~20M flush LP + ~33K burn mirror |
| Founder | 50,000,000 | 5% | Founder wallet — immutable — included in rewards |
| Bonus V1 | 50,000,000 | 5% | ~4.3M airdrop V1 holders + ~45.7M flush LP |
| TOTAL | 1,000,000,000 | 100% | Fixed supply — no mint ever |

* Total supply is fixed at deploy. No additional tokens can ever be minted.

## V. TAX STRUCTURE

| | TOTAL TAX | BURN | AUTO-LP | MARKETING |
|---|---|---|---|---|
| BUY | 2% | 1% | — | 1% → BNB auto-swap |
| SELL | 5% | 1% | 2% → addLiquidityETH → LP burned | 2% → BNB auto-swap |
| WALLET→WALLET | 0% | — | — | — |

Auto-swap threshold: 100,000 MHT. Anti-whale: max 1% supply per transaction (10,000,000 MHT).

## VI. MILESTONE REWARD SYSTEM

Every block, Chainlink Automation calls checkUpkeep(). When three conditions are met — MCap >= next milestone threshold, vault balance > 0, and 24h cooldown elapsed — performUpkeep() fires automatically.

| PARAMETER | VALUE |
|---|---|
| First milestone | $1,000,000 market cap |
| Increment | +$1,000,000 per milestone |
| Release per milestone | 5% of vault balance (floor 1M MHT / cap 20M MHT) |
| Split | 70% $MHT holders pro-rata / 30% auto-swapped to BNB → marketing wallet |
| Cooldown | 24 hours between milestones |
| MCap oracle | PancakeSwap reserves + Chainlink BNB/USD feed |
| Claim | claimRewards() — anytime — proportional to balance |

## VII. PROGRESSIVE LIQUIDITY (200M MHT — 5 TRANCHES)

| TRANCHE | AMOUNT | TRIGGER | MECHANISM |
|---|---|---|---|
| T1 | 40,000,000 MHT | MCap $1,500,000 | Auto swap 50/50 -> addLiquidityETH -> LP burned |
| T2 | 40,000,000 MHT | MCap $10,000,000 | Auto swap 50/50 -> addLiquidityETH -> LP burned |
| T3 | 40,000,000 MHT | MCap $25,000,000 | Auto swap 50/50 -> addLiquidityETH -> LP burned |
| T4 | 40,000,000 MHT | MCap $50,000,000 | Auto swap 50/50 -> addLiquidityETH -> LP burned |
| T5 | 40,000,000 MHT | MCap $75,000,000 | Auto swap 50/50 -> addLiquidityETH -> LP burned |

## VIII. LP FLUSH BY PRICE (~65.7M MHT — 6 TRANCHES)

| TRANCHE | TRIGGER PRICE | AMOUNT | MECHANISM |
|---|---|---|---|
| F1 | $0.0003 | ~1/6 of remaining | Auto swap 50/50 -> addLiquidityETH -> LP burned |
| F2 | $0.0004 | ~1/5 of remaining | Auto swap 50/50 -> addLiquidityETH -> LP burned |
| F3 | $0.0005 | ~1/4 of remaining | Auto swap 50/50 -> addLiquidityETH -> LP burned |
| F4 | $0.0006 | ~1/3 of remaining | Auto swap 50/50 -> addLiquidityETH -> LP burned |
| F5 | $0.0007 | ~1/2 of remaining | Auto swap 50/50 -> addLiquidityETH -> LP burned |
| F6 | $0.0008 | All remaining | Auto swap 50/50 -> addLiquidityETH -> LP burned |

## IX. SECURITY & AUDIT

| FEATURE | DETAIL |
|---|---|
| Ownership | renounceOwnership() at deploy — owner() = address(0) forever |
| Blacklist | Known bad actors silently redirected to burn address |
| Anti-whale | Max 1% supply per transaction (10,000,000 MHT) |
| Re-entrancy | _swapping flag on all auto-swap functions |
| LP locked | Initial LP (30M MHT + 10 BNB) locked 6 months on PinkLock |
| All future LP | LP tokens sent to burn address — permanent, irremovable |
| Slippage | SWAP_SLIPPAGE_BPS = 9500 (max 5%) on all internal swaps |
| Foundry tests | 17/17 PASS |
| Echidna fuzzing | 15/15 PASS — 50,000 transactions |
| Slither / Aderyn | 0 critical issues |
| SolidProof V2.3 & KYC | Audited 85.36/100 — https://app.solidproof.io/projects/milestone-hodl-token?audit=a6114b43-f4d5-46e9-ab7c-047dbda36eba |

## X. CONTRACT INFORMATION

| PARAMETER | VALUE |
|---|---|
| Token name | Milestone HODL Token |
| Symbol | $MHT |
| Network | BNB Smart Chain — ChainID 56 |
| Total supply | 1,000,000,000 MHT (fixed) |
| Decimals | 18 |
| Contract address | 0x22E0fcEc929c4F38c8D8c03B2B2F225E98F133fa |
| PancakeSwap pair | 0xe2e777cebca27a61ca8d2862e9d36c548cdd6e4e |
| Solidity version | 0.8.34 — EVM Paris — Optimizer 200 runs |
| BSCScan | https://bscscan.com/token/0x22E0fcEc929c4F38c8D8c03B2B2F225E98F133fa |

## XI. ROADMAP

| PHASE | MILESTONE | STATUS |
|---|---|---|
| Phase 1 | V1 deployment + presale + community launch | COMPLETED |
| Phase 2 | V2.3 contract + SolidProof audit 85.36/100 + DEX launch | COMPLETED |
| Phase 3 | MCap $1M — first milestone — Chainlink automation live | UPCOMING |
| Phase 4 | CEX listings — BitMart / Toobit / AscendEX | UPCOMING |
| Phase 5 | MCap $10M — T2 LP tranche — ecosystem expansion | UPCOMING |
| Phase 6 | MCap $25M+ — major CEX — ApexPad external launches | UPCOMING |
