Network	Total Supply	Smart-Vault	Trigger	Release	Automation

// I — ABSTRACT

Milestone HODL Token (MHT) is a decentralized protocol on BNB Smart Chain engineered to transform market growth into direct, automated rewards for holders. Chainlink Automation eliminates human intervention — distribution is strictly based on real-time Market Cap performance. Every $1,000,000 of growth triggers a release of 5,000,000 MHT from the Smart-Vault. No promises. Pure performance.

// II — THE APR MECHANISM

At the core of the MHT ecosystem lies the Smart-Vault (50% supply), governed exclusively by smart contract logic. Block-Level Snapshot: only true HODLers present at the exact moment of the milestone block are eligible to claim. Selling before a milestone means forfeiting rewards — a built-in incentive to hold long-term.

PARAMETER	VALUE	DETAIL
Milestone Threshold	$1,000,000	Market Cap growth required to trigger release
Release Amount	5,000,000 MHT	0.5% of total supply per milestone
Holders Share	70% — 3,500,000 MHT	Distributed pro-rata to all eligible holders
Liquidity / Mktg	30% — 1,500,000 MHT	Price stabilization + growth funding
Automation	Chainlink	100% decentralized — no human trigger possible
Reward Snapshot	Block-Level	Only holders at milestone block are eligible
Cooldown	24 hours	Minimum delay between two consecutive milestones
MCap Timelock	24 hours	Manual market cap updates require 24h timelock

// III — TOKENOMICS

ALLOCATION	AMOUNT (MHT)	%	PURPOSE
Smart-Vault	500,000,000	50%	Milestone reward releases
Presale (ApexPad)	100,000,000	10%	Price $0.0002 — Hard Cap $20,000 — Soft Cap $10,000
Liquidity (Progressive)	200,000,000	20%	4 tranches released with milestones
Marketing	150,000,000	15%	Growth, partnerships, listings
Team / Founder	50,000,000	5%	Eligible for rewards like any holder
TOTAL	**1,000,000,000**	**100%**	

Progressive Liquidity: T1 (80M) via enableTrading(), T2 (40M) Milestone 5 ($5M MC), T3 (40M) Milestone 10 ($10M MC), T4 (40M) Milestone 25 ($25M MC). LP locked 6 months via ApexPad — enforced on-chain. Starting Market Cap at launch: ~$200,000.

// IV — TAX STRUCTURE

TAX TYPE	RATE	BURN	MARKETING
BUY TAX	2%	1%	1%
SELL TAX	5%	1%	4%

Asymmetric tax structure: buying and holding is mathematically superior to short-term speculation. Every transaction burns 1% — permanent mechanical deflation. Anti-whale: max 1% supply per transaction (10,000,000 MHT).

// V — SECURITY STANDARDS

Locked Liquidity	LP locked 6 months via ApexPad (enforced on-chain). No rug pull possible.
SolidProof Audit	80/100 — report at app.solidproof.io. Certik/Hacken audit planned at $10M MC.
Anti-Reentrancy	OpenZeppelin ReentrancyGuard on all fund movements. Flash-loan protection included.
Anti-Whale	Max transaction capped at 1% of total supply (10,000,000 MHT).
Fair Launch	No private seed rounds. No hidden tokens. Founder: 5% — eligible for rewards.
Const. Deflation	1% of every buy/sell permanently burned — supply reduced with every trade.
Chainlink Oracle	Price data from Chainlink decentralized oracles only — tamper-proof.
Open Source	Contract verified and published on BSCScan. Anyone can audit at any time.
Ownable2Step	acceptOwnership() — prevents accidental ownership transfer to wrong address.
24h Cooldown	Mandatory 24h between milestones — prevents rapid Smart-Vault draining.
MCap Timelock	24h timelock on manual market cap updates — prevents instant manipulation.
Rescue Function	rescueTokens() — recover accidentally sent tokens (excluding MHT).

// VI — STRATEGIC ROADMAP

PHASE 1 Genesis & Launch	• ApexPad Presale — Price $0.0002 — Hard Cap $20,000 — LP Lock 6 months (enforced on-chain) • ApexPad: MHT's own launchpad — $0 listing fee — 2% success fee — audit 100/100 • PancakeSwap listing with locked liquidity T1 (80M MHT) • SolidProof audit 80/100 — Dashboard V5 live — Telegram bot active
PHASE 2 $1M Market Cap	• FIRST MILESTONE — 5,000,000 MHT released to holders • Chainlink Automation active on mainnet — T2 tranche released (40M MHT) • CoinGecko & CoinMarketCap listing applications • Community growth campaigns
PHASE 3 $10M Market Cap	• Recurring milestone reward cycles — T3 tranche released (40M MHT) • Global marketing & influencer partnerships • Tier-2 CEX listings • Tier-1 security audit — Certik or Hacken
PHASE 4 $100M+ Market Cap	• T4 final tranche (40M MHT) — Top-10 CEX listings (Binance / OKX / KuCoin) • Full Baron Ecosystem expansion • Governance DAO launch • Ultimate milestone holder payouts

// VII — CONTRACT & LINKS

Contract (Mainnet)	0x4EA0b53dC11c6C361904383b20E321d1478C37ac
Network	BNB Smart Chain (BSC) — ChainID 56
Dashboard	https://dev-mht.github.io/milestone-hodl-web/
Presale	ApexPad — https://apexpad.io
LP Locker	ApexPad — 6-month lock enforced on-chain

// VIII — CONCLUSION

MHT creates a perfect symbiotic relationship between market cap expansion and holder wealth. By replacing vague promises with automated Smart Contracts, MHT establishes itself as the premier "Proof-of-Performance" reward token. Every milestone reached is a milestone earned — by the market, for the holders.

Welcome to the Milestone Mansion.

Your patience is now automated.
